***Claim Rejections - 35 USC § 101***

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-21 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 1-21 do not detail a useful, concrete, and tangible result as required under M.P.E.P. 2106. A process / machine that merely manipulates an abstract idea or performs a purely mathematical algorithm is nonstatutory despite the fact that it might inherently have some usefulness. Claims 1-13 detail receiving a request and creating the object model architecture (software structure) based on the request. There is no concrete and tangible result based upon the creating. Claims 14-21 detail a medium having instructions for creating an object model architecture. All of the claims provide no useful, concrete, and tangible result or practical application either from the process or in the computer readable medium which is required as detailed in M.P.E.P. 2106. It would appear that the object model is used by the network device to manage a telecommunication network. This would provide the concrete and tangible result / practical application required for the claims and therefore would have to be claimed.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. All of the claims are for providing network management of a telecommunications network. However, there are no steps or instructions for this function to be realized. The steps/functions at best (claim 1) teach the creation of an object model upon receiving a request for such. However, the creation of an object model would not constitute managing of a telecommunications network. The claims appear to need a step/function of controlling said telecommunications network using the object model by said network device in order for the function to be realized.

### ***Conclusion***

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 2195

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
